

God	No God
God caused the universe to explode into being out of nothing.	Nothing caused the universe to explode into being out of nothing.
God tuned up the universe to allow life.	Nothing caused a lucky accident that tuned up the universe to allow life.
God designed D.N.A., the unimaginably complex instruction book for life.	Mindless chemicals blindly produced D.N.A., the unimaginably complex instruction book for life.
Microevolution exists. Macroevolution appears false because it is.	Macroevolution appears false but must be true, and must somehow account for the first life.
Science is a process we use to learn about the universe God created.	Science is a religion unto itself.
God is the moral code giver.	What is right and wrong is just a matter of personal opinion.
God's moral code of conduct is the unchanging standard that all actions can be measured against.	You've never disagreed with anyone else's moral position on anything because it's just their personal opinion.
God is the measuring stick outside human opinion.	"Society" is the measuring stick for what is right and wrong.
We have moral obligations to one another because we were created to live under God's moral code of conduct.	We are "evolved" animals and therefore have no more moral obligation to one another than the hyenas do for the wildebeest.
Human rights exist because all human life is precious. All human life is precious simply because it's Creator (God!) is special.	Humans are not specially created; they are accidents of nature.
